IVAN ARISMENDI

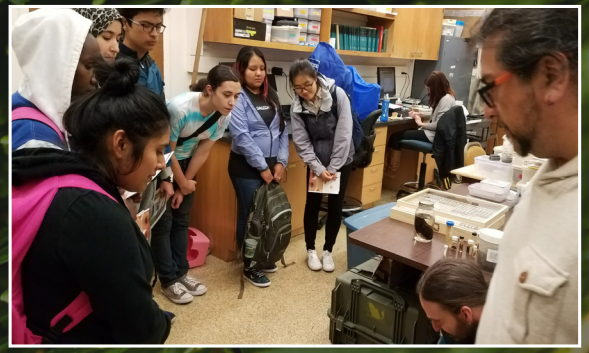
Assistant Professor

ABOUT ME:

I am from the southern cone of South America where empanadas, lamb, and temperate rainforests formed my early years. I am a quantitative aquatic ecologist interested in the links among water, land, and people.

TEACHING:

I teach Freshwater Ecology and Conservation and Endangered Species, Society and Sustainability.



RESEARCH:

My research is focused on freshwater-terrestrial links, invasive species impacts on aquatic and riparian ecosystems, and the consequences of climate change on freshwater ecosystems. I am also interested in issues related to diversity and inclusion in science. Since 2016, I am an Assistant Professor in the Department of Fisheries and Wildlife at Oregon State University.

ADVISING:

My role as a mentor is helping students become the professional/scientist they desire to be. My final goal is to help my students become good citizens, confident and meaningful contributors of science to the society at-large.
